Milling is the process of machining using rotary cutters to remove material by advancing a cutter into a workpiece. This may be done varying direction on one or several axes, cutter head speed, and pressure. Milling covers a wide variety of different operations and machines, on scales from small individual parts to large, heavy-duty gang milling operations.

Compressors and blowers installed in chemical plants can efficiently transport and pressurize fluids as well as transfer power. Their classification by type is shown in Table 5.1. This chapter describes the flow oscillations (pressure pulsations) in piping and the vibration of piping caused by suction/discharge flows in such fluid machinery.

The magnetic amplifier (colloquially known as a "mag amp") is an electromagnetic device for amplifying electrical signals. The magnetic amplifier was invented early in the 20th century, and was used as an alternative to vacuum tube amplifiers where robustness and high current capacity were required. World War II Germany perfected this type of amplifier, and it was used in the V-2 rocket.
