A transformer is a static electrical device that transfers electrical energy between two or more

circuits. A varying current in one coil of the transformer produces a varying magnetic flux, which, in turn, induces a varying electromotive force across a second coil wound around the same core. Electrical energy can be transferred between the two coils, without a metallic connection between the ...

Epitaxial oxide films enable a new generation of oxide electronic devices and energy applications. Materials such as Ga₂O₃, In₂O₃, and BaSnO₃ open up new horizons in semiconductor electronics, while ferroelectric and multiferroic perovskites bring promise of a wide range of novel devices. This symposium covers topics ranging from theory, growth, alloying, and interface/surface properties to ...
